

Dear Shutesbury residents:

This week's number is ... zero!

No cases and no contacts as of October 25.

When planning a group activity, or one that involves a person at risk for complications from COVID-19, it is wise to have a test first – you could be infected, and infectious, without knowing it. There are two free COVID testing sites available in Amherst, one at [UMass](#) and one at the [Bangs Center](#).
