Re: Plans for 26 Lake Drive, Shutesbury, MA 01072

To the Conservation Commission,

Please see the narrative below regarding the plans for 26 Lake Drive. We look forward to the meeting on September 24 (via Zoom) to answer any additional questions.

We purchased 26 Lake Drive realizing the existing cottage, well and septic would have to be replaced to meet the ConCom and BOH requirements. As such, we engaged professional services with the following individuals who are knowledgeable, experienced and committed in protecting and preserving Lake Wyola as a natural resource.

We engaged the services of Cold Spring Environmental who conducted our septic and well study and plans, which were approved. We also have been meeting with and have engaged the services of Dennis Clark of William W. Clark Excavating who has a long history and experience for septic installation, grading and demolition on Lake Wyola lakefront lots.

We have installed a Silt Sock across the entire lake front frontage for the well construction. This Silt Sock will remain in place for the entire project. All demolition and debris will be removed off site. All stockpiled material will be tarped and the silt fence will serve as the limit of work

We are committed to being responsible members of the Shutesbury Lake Wyola community. Thank you for your attention to this matter.
